

INSPECTING AND RELEASING GOODS AT A LAND, AIR, OR SEA BORDER

Abstract of the Invention

A method and system for use by a Customs Agency for clearing shipments of goods into a country is disclosed. A customs resource application may be used to integrate alert information, news, research, and communications capabilities. Customs inspectors may use the resource application with a conventional computer, or with a portable device in the field as they perform customs inspections. The portable device provides access to alert information regarding shipments that are to be inspected by the inspector, and provides alert resolution capabilities so that the inspector can clear shipments into the country from the location of the inspection and/or shipped goods without requiring the inspector to return to a field office to clear the goods.
